

BEYOND STAGE ZERO

Partner with Australia's student-built path to **reusable flight.**

Hardware on the stand. Vehicles in production.

First flight window Q4'26–Q1'27.

WHY WE EXIST

Australia’s first
fully and rapidly
reusable launch
vehicle – built by
students.

Stage Zero is the ground. Everything beyond it is what we’re building toward. From the Creswick Goods Shed, seventeen students design, machine, cast propellant, write range software, and fly hardware.

Apr ’25

FOUNDED

VIC

CRESWICK GOODS SHED

NOT A POSTER CLUB

Real engines.
Real fires.
Public record.

4

Static fires

Mk I & Mk II campaigns logged and published

9

Engines built

Ground motors through B1M production

4

Vehicles in pipe

Hopper + B1M-01 / 02 / 03

Q4-Q1

First flight

B1M-01 · 3 km systems validation

Failures are logged as carefully as successes — nozzle retention, casing redesign, propellant grade lessons.

NEAR-TERM

STRAVOX B1M

Sub-scale systems validation. What works on B1M goes on STRAVOX.

APOGEE	3 km
MOTOR	KNSB 550×80 mm
THRUST	~150 kgf · 3.5 s
FLIGHT	Q4’26–Q1’27

FULL-SCALE GOAL

STRAVOX

Fully and rapidly reusable. Airbrake + propulsive vertical landing.

APOGEE	30 km
PEAK	Mach 2.5
MASS	104.8 kg
LANDING	4× drone motors

MISSION PIPELINE

From stand to pad.

ACTIVE	Engine development	3× B1M engines in build · propellant characterisation · ceramic nozzles
Q3–Q4 '26	100 m Hopper	Drone-power hop — landing arms, handling, propulsive recovery
Q4'26–Q1'27	B1M-01 flight	3 km systems validation · primary near-term mission
2027	Full-scale STRAVOX	30 km · Mach 2.5 · propulsive landing — depends on B1M outcomes

SPONSORSHIP FUNDS FLIGHT HARDWARE

Back a programme already on the stand.

01

Real hardware

Published static fires, engines in build, vehicles in production — not a concept deck.

02

Reusable path

B1M → hopper → full-scale STRAVOX. A clear Australian reusable flight ladder.

03

Student-led

Seventeen builders at the Goods Shed, backed by CRWA and Ballarat Tech School.

04

Flight window

B1M-01 targets Q4’26–Q1’27. Support lands before first flight, not after.

WHAT SPONSORSHIP UNLOCKS

Propellant,
metal,
electronics,
range readiness.

A Propulsion KNSB ingredients, casing stock, nozzle materials, static-fire consumables	B Structures Tube, fins, recovery bay, machining stock for B1M and hopper	C Avionics Flight computers, altimeters, GPS, batteries, parachutes
D Range & ops CASA path, range logistics, Octopus ground hardware, mission control	E Workshop Metrology, casting fixtures, test-stand instrumentation	F In-kind Materials, CNC time, composites, electronics, logistics expertise

01

Mission Partner

Anchor a vehicle or campaign — B1M flight, hopper, or named static-fire series.

- Primary logo on vehicle / stand
- Featured site & materials
- Named in news & flight updates
- Workshop + flight-day access
- Direct line to team leads

02

Programme Sponsor

Sustained cash or in-kind across propulsion, structures, or avionics.

- Logo on partners section
- Credit in test & mission pages
- @beyondstagezero recognition
- Invite to fires & build days

03

Supporter

Targeted help — materials, tools, components, or a one-off gift.

- Listed with partners
- Thank-you in campaign update
- Follow the programme

Brand association

Tie your name to Australia’s student-built reusable flight programme.

Visible hardware

Logos and credits on real vehicles, stands, and published campaigns.

Talent pipeline

Seventeen builders learning propulsion, structures, avionics, and ops.

Regional story

Creswick and Ballarat — aerospace from a Goods Shed, not a CBD tower.

Open progress

We publish fires, failures, and milestones. Support shows in the public record.

Access

Come to the workshop. Watch a static fire. See the hardware you helped fund.

SEVENTEEN STUDENTS

The crew.

Will · Seb · Jet · Columbus · Arnav · Wave · Sage
· Abby · Alice · Chelsea · Declan M · Declan S ·
Lilly · Nia · Oscar · Zafran · Ziad
